Work Experience

Sep 2023 - Aug 2024

Software Developer

Syncfusion

As a software engineer, I focus mainly on full stack development, where I build and maintain the user-facing parts of websites. I have worked with frameworks like React, Vue, and Nuxt, and I???m responsible for integrating new features, fixing issues, and connecting the front end to back-end services using REST APIs and GraphQL. I also use JavaScript and TypeScript in my projects to make sure the code is efficient and scalable. My goal is to create responsive, user-friendly interfaces that follow best practices in web development.

Projects

6 Months

Web application based on Nuxt framework

I worked on a web application built with the Nuxt framework, where I integrated APIs, handled server-side data, and collaborated closely with the server and UI/UX teams. Additionally, I learned GraphQL to efficiently fetch data from the server and wrote test cases using Vitest to ensure code quality and functionality. This role required a combination of technical skills and teamwork to deliver a smooth and reliable user experience.
